

iOS Technical Exercise

Goal

Please build an app which retrieves and displays the list of Tronald Dump tags described in the data provided by Get tags endpoint below. When an item in the list is tapped the app should transition to a detail view which displays the tag data provided by the Get tag endpoint.

Requirements

- Please use Swift 5.1 and UIKit
- Please follow the MVVM or MVC design pattern
- Feel free to use any 3rd party libraries
- The app should support iOS 10.0 and up
- The UI should display correctly on multiple screen sizes
- Please don't spend more than 4 hours on the task, an unfinished project is fine as we're interested to see what you do know, not how far you get

Resources

Get tags endpoint
